JARROD J. SCOTT

an old-school naturalist using new-school tech

I study microbial diversity. My holistic approach spans marine & terrestrial systems to better understand how a collection of simple organisms coalesce into complex communities & how the structure of these communities affect host biology, biogeochemical cycles, & ecosystem-level processes. To make research more accessible & exciting, transparent & reproducible, I use & teach open-source tools to make web products that communicate science more effectievly.
