

JARROD J. SCOTT

an old-school naturalist using new-school tech

I study the organization of microbial diversity. I do my best to take a holistic approach to build & see the bigger picture. My work is systems agnostic, meaning my studies span ecosystems, from the forest floor to the ocean floor. I am interested in making science accessible & exciting as well as transparent & reproducible. I use open-source tools to build web products that communicate many aspects of my science.
