

# JARROD J. SCOTT

## an old-school naturalist using new-school tech

I study microbial diversity. My holistic approach spans marine & terrestrial systems to better understand how a collection of simple organisms coalesce into complex communities & how the structure of these communities affect host biology, biogeochemical cycles, & ecosystem-level processes. I also want to make research more accessible & exciting, transparent & reproducible. To that end, I make & teach open-source tools to create web products that communicate science more effectively.

## RECENT TEACHING EXPERIENCE

All research cruises from 2012 - 2014 were to study the microbial ecology of deep-sea hydrothermal systems, specifically iron-oxidizing communities.

I've also worked on a lobster boat in Maine & a seine boat in Alaska.

A lot of my field experience in terrestrial systems is on fungus-growing ants in the Neotropics.
